<문제정답1>

```
n=int(input())
for i in range(1,n+1):
    print("*"*(i))
```

<문제정답2>

```
n=int(input())
for i in range(n,0,-1):
    print("*"*(i))
for i in range(1,n+1):
    print("*"*(i))
```

<문제정답3>

```
n=int(input())
for i in range(n,0,-1):
    print(" "*(n-i),end="")
    print("*"*(i))
```

<문제정답4>

```
n = int(input())
for i in range(1, n+1):
    print(" " *(i -1)+ '*' *(2*n -2*(i-1)-1))
```

<문제 정답5>

```python
ch = ord('A')
n = int(input())
for i in range(n, 0, -1):
    for j in range(i):
        print(chr(ch), end = '')
        ch += 1
    print()
```

<문제정답6>

```python
a, b = map(int, input().split())

for j in range(1, 10):
    if a < b:
        for i in range(a, b+1):
            print( "%d * %d = %2d" %(i, j, j*i), end = '    ')
        print()
    else:
        for i in range(a, b-1, -1):
            print( "%d * %d = %2d" %(i, j, j*i), end = '    ')
        print()
```
